

Building library management software at Tan Phong Secondary School

Nguyen Manh Cuong

Abstract: This topic aims to determine the necessity of a library management system in the current context of Tan Phong Secondary School, with the goal of building a technical solution to enhance the efficiency of organizing and operating library activities. Through a process of theoretical research combined with experimentation, the topic applies advanced technologies to develop a library management software system. The expected results of the topic not only improve the quality of services for students and teachers but also contribute to the sustainable development of the education sector through the modernization of library management.

Keywords: Library management software, Tan Phong Secondary School, advanced technology, library system, effective management
