

Building a Computer Hardware Repair Ebook

Nguyen Van Huy

Abstract: In technological practice, the demand for computer hardware repair and maintenance is increasing, yet it faces many limitations regarding detailed information and practical guidance. This project aims to build an ebook that compiles the necessary knowledge and skills for effectively repairing and maintaining computer hardware components. The research method applied is a combination of collecting data from reliable sources and conducting practical experiments. The project is expected to deliver high practical value by providing a comprehensive, accessible reference document for users ranging from basic to advanced levels.

Keywords: Ebook, Hardware Repair, Computer
