

Developing some software maintenance methods for a unit.

Luong Van Khoa

Abstract: In the context of rapidly developing information technology, building and applying appropriate software maintenance methods is a practical need for many organizations. This topic aims to research and propose effective methods for maintaining software systems in a specific unit. Through a combination of theoretical research and practical application deployment, the topic seeks to provide feasible solutions to enhance the quality and reliability of software systems while optimizing maintenance costs. The expected results of this work will contribute significantly to the field of software system management and operation.

Keywords: Software maintenance, Information technology, Software system
