

Building a social policy loan management application for Thai Nguyen province.

Pham Thi Dieu Linh

Abstract: In the context of the increasing demand for effective management of social policy loans at the provincial administrative level, this topic focuses on researching and implementing a management application system to optimize the use of capital resources. The project aims to build a technological solution that improves efficiency and transparency in the distribution of social policy loans while minimizing risks related to financial management. The research methodology combines learning from modern loan management models with practical experimentation in Thai Nguyen province. The expected results hold significant practical value in enhancing the quality of public services and supporting socio-economic development.
