

Building the installation and maintenance process for computer practice rooms at the University of Information Technology and Communications.

Dao Anh Tuan

Abstract: This topic focuses on designing and implementing a process for installing and maintaining computer systems for practice rooms at the University of Information and Communication Technology. Through theoretical research combined with experimentation, the goal of the topic is to create an effective management process to optimize the usability and stability of the computer system. Expected results include detailed instructions on installation, security testing, and computer maintenance, thereby improving the quality of teaching and learning at the university.

Keywords: management process, computer system, laboratory, ICT University, maintenance management
