

Research and application of ESSENTIAL PIM software in work schedule management at the Thai Nguyen Province Business Support Center.

Ma Thi Hanh

Abstract: This topic aims to study and evaluate the effectiveness of applying ESSENTIAL PIM software to work schedule management at the Thai Nguyen Province Business Support Center. The reason for choosing this topic stems from the actual need to optimize the center's workflow. The objective is to build an efficient and easy-to-use management system, while reducing the workload for employees. The research method combines theory with experimentation to evaluate and improve the software's functions. The expected result is to provide a flexible solution that meets the diverse needs of the center and contributes to sustainable development in business management.
