

Computerizing the management of records for poor and near-poor households at the People's Committee of Dong Hung Commune - Yen The District - Bac Giang Province

Lo Thi Le

Abstract: In the context of policies supporting people in difficult circumstances being widely implemented, the application of information technology to manage records of poor and near-poor households has become an important issue. This study aims to develop an effective electronic record management system at the People's Committee of Dong Hung Commune, Yen The District, Bac Giang Province. Through theoretical and experimental research, the study plans to build a solution integrating modern information technologies to improve management quality and enhance the work efficiency of local officials. This result not only has high practical applicability but also contributes to promoting the administrative reform process at the local level.
