

Computerization of birth registration management at Trung Luong Commune People's Committee, Dinh Hoa District, Thai Nguyen Province

Nong Thi Loan

Abstract: In the context of increasingly complex population management, this topic aims to address the efficiency and accuracy of birth registration processes through the application of information technology at the People's Committee of Trung Luong Commune, Dinh Hoa District. The objective is to build an electronic information system to support civil registration management. The research methodology includes experimentation and practical application deployment. The topic hopes to contribute to enhancing the management capacity of administrative units, thereby creating breakthrough improvements in this field.

Keywords: computerization, civil registration, electronic information system, population management, information technology
