

# **Application of information technology in document management at the Thai Nguyen Provincial Business Support Center.**

**Nong Thi Quyen**

**Abstract:** In the context of increasing digitalization, the application of information technology to document management at the Thai Nguyen Provincial Business Support Center has become an urgent need. This study aims to research and build a document management system based on information technology, with the goal of improving management efficiency and serving local businesses. The research method combines current status assessment, requirement analysis, and experimental implementation. The expected results will provide an effective information technology application solution for document processing, contributing to improving the service quality of the Business Support Center.
