

Enhancing the effectiveness of communication work at the People's Committee of Minh Tri Commune, Soc Son District, Hanoi City through the application of Jweb.

Dang Hong Tham

Abstract: This topic aims to address the issue of low performance in communication activities at the People's Committee of Minh Tri Commune, Soc Son District, Hanoi City. Through theoretical research combined with practical implementation of the Jweb application, the goal is to improve the quality and effectiveness of communication work. The proposed method is based on analyzing the current situation, assessing needs, and building an information management system using Jweb to optimize the process of information exchange and dissemination. The expected result is to create a technical platform that effectively supports communication work, contributing to improving the administrative management capacity of the Commune People's Committee.
