

Computerization of management of cadres and civil servants information at Binh Duong Commune People's Committee - Dong Trieu Town - Quang Ninh Province

Pham Thi Thoa

Abstract: In the context of high demands for efficiency and transparency in managing information of cadres and civil servants at the commune level, this topic aims to develop a support system for managing cadre and civil servant information to enhance work quality. The research method applies a combination of theory and experimentation to create a specific technical solution. The expected results are groundbreaking in optimizing the information management process, making a significant contribution to local administrative reform.

Keywords: Informatization, information management, civil servants, management support system, administrative reform
