

Research on the criteria set for evaluating the development of the industrial sector and its application in Thai Nguyen province

Nguyen Thi Thao

Abstract: This topic aims to research and develop a set of criteria for evaluating the development of the industrial sector in Thai Nguyen province, providing a reference framework to assess the current state of the industry in the present context. The main objective is to identify key factors contributing to the sustainable development of the local industrial sector. The research method combines theory and practice, based on field surveys and data analysis to build a suitable set of criteria. The topic hopes to contribute a new approach to evaluating the effectiveness of industrial development policies in Thai Nguyen province, while raising awareness of the importance of establishing clear criteria in the management and operation of the industrial sector.

Keywords: Industrial development criteria, Thai Nguyen, field survey, data analysis
