

Application of information technology in accounting for raw materials at Thanh Cong Trading Joint Stock Company, Lao Cai

Nguyen Thi Van

Abstract: This topic aims to research and implement an information technology (IT) application solution for raw material accounting at Thanh Cong Trading Joint Stock Company, Lao Cai. The practical context shows that effective raw material management is a key factor in improving business operational efficiency. The objective of the topic is to build an automated raw material accounting management system with the purpose of optimizing operational processes, minimizing errors, and enhancing control. The research methodology includes analyzing the current situation, comparing models, and conducting experimental implementation at the company. The expected result is that the system will bring significant efficiency in raw material management, contributing to enhancing the competitive position of Thanh Cong Trading Joint Stock Company in the local market.
