

Building a 3D website to display Vietnamese historical artifacts

Nguyen Duy Tan

Abstract: This topic aims to research and develop an online display system by building a 3D website, meeting the need for storing and introducing Vietnamese historical artifacts with high detail. Through the experimental process, the topic combines a design method based on data science theory with modern web development technology to create a unique interactive experience for users. The results of the topic not only contribute to the preservation of cultural heritage but also expand the accessibility of historical information for the community, thereby enhancing education and research.

Keywords: 3D website, historical artifacts, digital, online exhibition, data science
