

Create a 3D animated music video for the song "ABC Song".

Dang Thi Khanh Hoa

Abstract: This study focuses on creating an animated video for the song 'ABC song' using 3D technology. The research background highlights the necessity of producing music education content through modern methods to enhance interaction and learning effectiveness. The project's objective is to develop an automated system for generating high-quality animated videos with high customizability. The research methodology includes both theoretical aspects of 3D techniques and practical implementation of this application for the specific song. The expected outcomes of this study not only contribute to the field of computer graphics but also expand knowledge on the use of 3D technology in music education.

Keywords: Animated video, 3D technique, music education, graduation project, automation system
