

Learn some techniques for separating a person from the background in Matlab

Nguyen Trong Thanh

Abstract: This topic focuses on researching and implementing techniques for separating people from background scenes, aiming to meet the demands of real-world image and video processing. The goal is to build an efficient working system by using Matlab to analyze, design, and test modern methods. Through this process, the topic hopes to contribute to the development of image processing technology and its applications in various fields such as entertainment, healthcare, and communications.

Keywords: Separate person from background, Matlab, image processing, digital, analysis system
