

Building a paid online book reading website

Nguyen Trung Hieu

Abstract: In the context of increasing digitalization of information and the growing demand for online reading, this topic aims to research and develop a website system that allows users to access and purchase e-books on a paid basis. The main objective of the project is to design and build a user-friendly interface, ensure information security, and provide a high-quality reading experience. The research methodology includes analyzing user requirements, designing the database, and implementing the web application. This topic hopes to contribute an innovative solution for e-book publishers and serve the learning and entertainment needs of readers.

Keywords: Website for reading books, E-books, Information security, User interface, Web technology
