

Building a hotel booking support website for tourists.

Tran Van Quy

Abstract: In the context of an increasingly developing tourism market, building a website that supports hotel booking for travelers has become extremely necessary. This project aims to solve the problem of helping tourists easily search for and book rooms at hotels through an intuitive and user-friendly interface. The research methodology includes synthesizing and analyzing information from reputable sources, building a web interface based on User-Centered Design principles, and implementing a practical application to verify its effectiveness. The project hopes to contribute to the development of information technology serving tourism while providing a useful solution for hotel owners.
