

Building an English learning application on the Android operating system

Tran Thi Thanh Hien

Abstract: In the context of the increasing demand for English language use in communication and work, this topic focuses on building an English learning application based on the Android platform. The main objective of the research is to design and implement an effective curriculum system to support users in improving their English skills through diverse lessons, including vocabulary, grammar, and pronunciation. The research method combines language education theory and mobile application development experimentation. The expected result is to provide a useful solution to promote autonomous and effective English learning.
