

Building a server system for operating a Poker game for Hoang Hiep Technology Joint Stock Company - Hanoi.

Nguyen Thi Vinh Linh

Abstract: This topic aims to research and design a robust Server system to support the operation of online Poker games for Hoang Hiep Technology Joint Stock Company in Hanoi. In the current context, the demand for online gaming is increasing, requiring Server systems to have fast and stable transaction processing capabilities. The objective of the research is to build an efficient Server system to ensure a smooth gaming experience for users. The applied methods include market survey, technical requirement analysis, and practical deployment on modern technology platforms. The expected outcome of the topic is not only an efficient Server system for operating Poker games but also a contribution to the development of the information technology industry in Vietnam.
