

Building a testing solution for the Super Commander game application for Hung Cuong Communication Joint Stock Company - Hanoi.

Doan Thi Mung

Abstract: In the context of the rapidly developing video game industry, the problem of ensuring the quality of game products has become urgent. This topic focuses on building a testing solution for the Super Commander game application for Hung Cuong-Hanoi Media Joint Stock Company, aiming to provide an effective automated testing system to improve quality and reduce product development time. The research method combines theory with experimentation, based on modern testing methods. Thereby, the topic not only contributes to the field of game technology but also provides valuable knowledge for future product development processes.

Keywords: Application testing, Super Commander game, game technology, automated system, product quality
