

Building a football field management website for ICTU-Thai Nguyen

Luong Thi Thuy

Abstract: This topic aims to solve the problem of improving management efficiency and customer service for football fields at Thai Nguyen University of Technology (ICTU). Through theoretical research on website administration, along with the implementation of practical applications, the topic will build a football field management Website system. The methodology includes surveying the current situation, analyzing requirements, and designing a suitable user interface. Thereby, it aims to contribute to promoting local sports tourism development and enhancing customer experience when using football field services. The project is expected to bring significant practical value through the automation of management processes, while providing a technology platform to support the optimization of customer service processes.
