

Developing an information management system for teaching plans for lecturers of the Faculty of Information Technology - University of Information and Communication Technology

Luu Van Thang

Abstract: This topic aims to solve the problem of effectively managing teaching plan information for lecturers at the Faculty of Information Technology, University of Technology and Information. The objective of the research is to design and implement an automated management system for teaching information. The method combines academic and experimental approaches to develop an optimal solution. The expected results from this topic will improve lecturer work performance, enhance educational quality, and contribute significantly to modern educational management research.
