

Building an electronic document sharing system for ICTU students.

Le Ngo Viet Anh

Abstract: In the rapidly developing digital context, managing and sharing documents among students of Information and Communication Technology (ICTU) has become important. This topic focuses on designing and implementing an electronic document sharing system to improve learning efficiency. Through theoretical research combined with experimentation, the goal is to build a safe, easy-to-use, and customizable solution for students. Expected outcomes of this topic include providing a solid technical foundation to support the learning process while enhancing students' access to information.

Keywords: Document sharing system, Information and Communication Technology (ICTU), Electronic document management
