

Build a management program for Ngoc Anh-Thai Nguyen tire company using C#.NET programming language.

Pham Duc Thinh

Abstract: This topic aims to research and develop a management system based on .NET technology to support the operations of Ngoc Anh-Thai Nguyen Tire Company. The problem is to modernize work processes, optimize production performance, and improve the quality of supply services. The objective of the research is to build a professional software solution to help the company manage customer data, products, and transactions efficiently. The method applied combines analyzing real-world requirements with implementing source code based on the C#.NET programming language. This not only contributes to improving the company's management capabilities but also aims for widespread application in the Vietnamese tire industry.

Keywords: C#.NET, Tire and tube management, Management system, .NET Framework, Ngoc Anh-Thai Nguyen Company
