

Assessment of FTTH optical network quality in Dong Hy District

Lai Thi Nhung

Abstract: This topic aims to evaluate the quality of the FTTH optical network in Dong Hy District, in order to identify existing problems and propose improvement solutions. Thereby, enhancing the efficiency of high-speed data transmission services in practice. The research methodology includes data collection through field surveys and technical analysis. The expected results will provide valuable information for managers and businesses regarding optical network quality, thereby enabling decisions to optimize the system.
