

Building a drug management program at Gia Cat commune health station, Cao Loc district, Lang Son province

Nguyen Minh Hue

Abstract: In the context of human resource and resource shortages, building a drug management system for Gia Cat Commune Health Station is necessary to optimize drug usage and better serve the community's healthcare needs. This study focuses on the goal of designing and implementing a drug management program based on legal regulations regarding drug storage and distribution, along with the application of information technology to enhance operational efficiency. The research methodology includes both theoretical and experimental studies to identify technical requirements and build the system. The study is expected to contribute to improving the quality of healthcare services and reducing drug waste, thereby creating significant benefits for the health station and the local community.
