

Research on the operation, maintenance, and troubleshooting of some common issues for the Mindray BS 200E biochemical analyzer.

Tran Thai Son

Abstract: This topic aims to study the operation and maintenance procedures as well as troubleshooting common issues on the Mindray BS 200E biochemical analyzer. Through theoretical and experimental analysis, the goal is to improve the device's working performance and enhance the quality of medical services. Through this research, the topic hopes to provide engineers and maintenance staff with a detailed guide on how to handle malfunctions, thereby strengthening their ability to respond to abnormal situations during the machine's operation.

Keywords: Research, operation procedure, maintenance, troubleshooting, biochemical analyzer
