

Building an inpatient management program at the Phuong Vien commune health station, Cho Don district, Bac Kan province.

La Thi Hanh

Abstract: This topic focuses on building an inpatient management system at the Phuong Vien commune health station, Cho Don District, Bac Kan Province. Given the necessity of effective and modern management in the community health sector, the research proposes a solution based on advanced management principles, combined with experimentation to optimize the patient care process. The applied methods include requirements analysis, system design, application deployment, and effectiveness evaluation. The expected outcome of this research is to provide a digital platform that improves the quality of medical services and enhances work performance for health station staff.

Keywords: Patient management, medical station, inpatient management system
