

Building an automatic timekeeping device for Thai Nguyen Mechatronics Joint Stock Company.

Do Viet Thuong

Abstract: This topic aims to propose a comprehensive plan for building and deploying an automatic timekeeping system at Thai Nguyen Mechatronics Joint Stock Company. The goal is to solve the problem of effective human resource management, reduce labor costs, and improve the accuracy of the timekeeping process. The research method includes analyzing the current situation, designing the system, and implementing experimental deployment. This project is expected to bring significant management benefits and improve work performance at the company.
