

OneDrive software application for storing documents at the People's Committee of Cho Don District - Bac Kan Province

Hoang Thị Chien

Abstract: This topic aims to research and deploy the OneDrive software application for document storage at the People's Committee of Cho Don district, Bac Kan province. The context of the topic stems from the need for effective electronic information management in administrative agencies. The objective of the research is to build a safe and flexible storage system to support state management work. The research method combines theoretical research with experimental deployment at the People's Committee of Cho Don district. Through this, the topic hopes to contribute to improving information accessibility and enhancing the efficiency of administrative management.

Keywords: OneDrive, document storage, information technology, administrative management, District People's Committee
