

Improving the quality of document management at the Department of Planning and Investment of Thai Nguyen province based on 1C software.

Trieu Thi Thu Hang

Abstract: This topic aims to address the issues of performance and accuracy in document management at the Department of Planning and Investment of Thai Nguyen province through the implementation of the 1C software application. The objective is to build an automated system that optimizes the document management process, thereby enhancing the work capacity and efficiency of the staff. The research method combines information management theory with practical software deployment in a specific work environment. The expected results will provide a practical solution to improve the quality of document management while contributing to the development of the information management field.
