

Building a fixed asset management program for Ha Long Construction Company Limited - Thai Nguyen City

Nguyen Thi Tu Anh

Abstract: In the context of fixed asset management at construction enterprises increasingly demanding efficiency and accuracy, this topic focuses on designing a fixed asset management system to meet the practical needs of Ha Long Construction Company Limited - Thai Nguyen City. The objective of the research is to develop a management program that helps the company enhance efficiency in tracking, monitoring, and optimizing the use of fixed assets. Through a research process combining fixed asset management theory with experimentation, the topic is expected to provide specific technical solutions to support asset management in construction enterprises, while contributing to the development of asset management systems in the Vietnamese construction sector.
