

Building a software product project management program for DKT Technology Joint Stock Company in Hanoi.

Ngo Thi Hai Yen

Abstract: This topic aims to research and build a software product project management system suitable for the business operations of DKT Technology Joint Stock Company. The context of the topic stems from the need to optimize project management processes in a technology environment, in order to improve the performance and quality of software products. Through a combination of theoretical research and experimentation, the objective of the topic is to provide a comprehensive solution for the project management system, thereby supporting the enterprise in achieving important business goals. The expected results of the topic not only contribute to improving current work processes but also bring great value in terms of practical application and create a breakthrough in software product project management.
