

Building a material import-export management program at Son Nam Company Limited, Thai Nguyen

Nguyen Thi Thuy Linh

Abstract: In the context of supply chain management becoming increasingly important in business, this topic focuses on building a material input-output management system for Son Nam Company Limited in Thai Nguyen. The objective of the research is to develop and implement a technological solution that improves efficiency and transparency in the material management process. The research methodology combines practical analysis, system needs assessment through surveys, and the use of programming tools to design and deploy the application. The expected results will bring significant improvements in operational performance while providing a foundation for future supply chain management processes.
