

Building the fixed tangible asset accounting subsystem at Hanoi Railway Transport One Member Limited Liability Company - Hai Phong Branch

Le Thu Hien

Abstract: In the process of managing business operations, building and implementing a fixed asset accounting subsystem plays an important role. This topic aims to solve the problem of improving fixed asset management efficiency through the design and implementation of a specialized accounting information system for Hanoi Railway Transport One Member Limited Liability Company - Hai Phong Branch. Through research, the topic applies a combined approach between accounting theory and experimentation to ensure the accuracy and effectiveness of the system. The results from this topic are expected to bring many contributions to fixed asset management at the enterprise, while providing a foundation for developing digital solutions in the accounting field.
