

Building the cash accounting subsystem for Viet Nhat - Hanoi Construction Investment and Trading Joint Stock Company

Pham Thi Ngoc

Abstract: In the context of increasingly complex financial management, this topic focuses on developing a cash accounting subsystem for Viet Nhat Construction Investment and Trading Joint Stock Company in Hanoi. The objective of the research is to provide an effective solution to enhance the monitoring and management of cash flow, ensuring accuracy and timeliness in financial reporting. By combining methodology from both accounting theory and practical application deployment, the topic aims to contribute a useful tool for the company's financial operations. The expected results will not only improve financial management performance but also provide management with critical information on cash status for business decision-making.
