

Building a warehouse management program at The Gioi So Joint Stock Company - Thai Nguyen

Linh Thi Lam Sinh

Abstract: In the context of increasingly complex warehouse management, this topic focuses on building a warehouse management system to optimize operational processes at The Gioi So - Thai Nguyen Joint Stock Company. The objective of the research is to develop a modern technological solution to improve efficiency and accuracy in inventory management, thereby enhancing the company's overall operational productivity. The research methodology includes both analyzing the actual requirements at the company and designing the system based on advanced management models. The expected result is an effective warehouse management system, while also contributing to the sustainable development of the enterprise.
