

Building a task management and assignment module for the management website of the Department of Networks & Communications - Faculty of Information Technology

Nguyen Duc Duong

Abstract: In the context of increasing demand for effective work management, this topic focuses on building a module system for task management and assignment for the management website of the Department of Networks & Communications. The goal is to improve work efficiency and transparency in the management process. Through theoretical research on project management and experimental implementation, this topic proposes solutions to optimize task assignment and progress tracking. The expected outcome of this topic is an effective management system that contributes to enhancing the quality of work within the department.

Keywords: Project management, Management website, Task assignment, Information technology, Department of Networks & Communications
