

# **Building a simple social network for students of the University of Information Technology & Communication.**

**Giap Manh Dong**

**Abstract:** In the context of increasing digitalization, social networks have become an indispensable tool for students. This topic aims to address the complexity of current social media applications and the user demand for simpler usage. Through a combination of theoretical research and experimentation, the project will build a new, accessible social network system for students. The ultimate goal is to create an effective communication tool that contributes to the development of students' technical and communication skills.

**Keywords:** social network, students, mobile application, empirical research, Information & Communication Technology
