

Building an English learning application for high school students on the Android operating system.

Nguyen Thi Hoai

Abstract: In the context of today's education, accessing digital tools to support the learning process has become important. This topic focuses on building an English learning application for high school students on the Android platform, aiming to address the shortage of high-quality educational resources and traditional teaching methods. Through a combination of theoretical research and experimentation, this project expects to provide an effective and flexible learning solution for high school students. The expected outcomes of this topic are not only in creating the application but also in contributing to improving the overall quality of education through the use of technology.
