

Building a firewall system for the network of Thai Binh clean food supermarket.

Phan Cong Huu

Abstract: This topic focuses on building and deploying an effective firewall system for the network of a clean food supermarket in Thai Binh province, aiming to protect information security and prevent external threats. Through theoretical and experimental research, the topic identifies specific technical requirements, selects an appropriate design method, and deploys the firewall system accordingly. The results of the topic not only provide a network security solution for the supermarket but also contribute to raising awareness about cybersecurity within the local business community.

Keywords: firewall, cybersecurity, supermarket, clean food, Thai Binh
