

Building a training management website for the Department of Networks & Communications - Faculty of Information Technology

Nguyen Thi Thu Huyen

Abstract: In the modern context, effective management of training activities is a decisive factor in the quality of human resources in the field of information technology. This topic aims to solve the problem of improving the productivity and accuracy of the student management process at the Department of Networks & Communications - Faculty of Information Technology, XYZ University. Through theoretical research on training management combined with experimental deployment of a web-based application on a modern platform, the topic builds a website system to effectively support teaching and learning activities. The expected result is the optimization of management processes, improvement of human resource quality, and meeting the development needs of society.

Keywords: Management website, Training operations, Network & Communication, Faculty of Information Technology, Web-based system
