

Building the HMLFOOD online food ordering section for mobile phones on the Android operating system platform.

Hoang Thi My Le

Abstract: In the current context, accessing the internet from mobile devices is increasingly popular. This topic focuses on developing an online food ordering application called HMLFOOD for mobile phones, based on the Android platform. The goal is to create a system that is convenient for customers and efficient for store managers. Through theoretical research combined with experimentation, the topic is expected to provide a solution that optimizes the ordering process, thereby improving user experience and increasing revenue for food establishments. The expected results contribute to the development of mobile applications in the culinary service sector.

Keywords: Android application, Online food ordering, Mobile platform
