

Design and build a secure network model with Cisco Firewall ASA for Quang Minh Group Joint Stock Company - Bac Giang

Luc Van Luan

Abstract: In the context of increasingly frequent cyber attacks, designing and implementing an effective security system has become extremely important. This topic focuses on building a secure network model using Cisco Firewall ASA for Quang Minh Group Joint Stock Company in Bac Giang. The project's objective is to ensure information security, prevent attacks, and maintain the stable operation of the network system. The research method combines theory with experimentation to provide a comprehensive solution for network security issues. The expected results of this project not only enhance the quality of information security but also contribute to the development of security technology in enterprises.
