

Building a GRE preparation support application for ICTU students on the Android platform.

Dinh Manh Tuong

Abstract: This topic addresses the necessity of improving English proficiency through the GRE exam for students of the Faculty of Information and Communication Technology (ICTU). The main objective is to develop an Android application that provides effective learning methods, including a question bank, result analysis, and learning path suggestions. The research methodology is based on synthesizing knowledge from existing materials and conducting experiments with test subjects to evaluate the application's effectiveness. The expected outcome is a useful solution to help ICTU students enhance their English skills, while also contributing to the development of educational technology within the university.

Keywords: Android application, GRE preparation, technical education, computer science, improving English proficiency
