

Building a network security solution for the enterprise network system of Thai Nguyen University of Economics and Business Administration.

Le Duy Phuong Quyen

Abstract: In the increasingly complex context of cybersecurity, this topic focuses on building an enterprise network security solution suitable for the network system of Thai Nguyen University of Economics and Business Administration. The objective of the research is to develop and deploy effective protection measures to enhance information security for the organization. The research method combines theory and experimentation, utilizing advanced technologies in the network security industry to build a comprehensive security system. The expected results of the topic not only provide a robust security solution but also contribute significantly to raising awareness about cybersecurity in the educational community.

Keywords: Network security, enterprise, Thai Nguyen University of Economics and Business Administration, advanced technology, comprehensive security system
