

Building a management website for Binh Yen Company - Thai Nguyen

Le Xuan Thao

Abstract: This topic focuses on building an effective website management system for Binh Yen Company in Thai Nguyen. Given the outdated information management situation, it is necessary to implement a digital solution to enhance work productivity and optimize operational processes. The objective of the topic is to build a web platform that meets multi-functional management requirements, including project, employee, customer, and business report management. The research method combines user needs analysis with experimental implementation using modern frontend technology such as React.js and backend with Node.js. This deployment not only improves the management efficiency of Binh Yen Company but also contributes to the trend of enterprise digitalization in the Thai Nguyen region.
