

Building a TOEIC exam preparation application and tracking student learning progress on the Android platform

Nguyen Thi Theu

Abstract: In the current era of rapid information technology development, the demand for improving foreign language skills, especially English through international exams such as TOEIC, is increasing. This topic focuses on building a mobile application to support students' preparation process and track their learning progress on the Android platform. Through theoretical research on mobile application development, learning management system design, and implementation experiments, the topic aims to provide a comprehensive solution to enhance the effectiveness of TOEIC preparation and optimize students' learning process.

Keywords: Android application, TOEIC exam preparation, Study management, Mobile development, Management system
