

Build a shipping management application for the transport company Khanh Thinh - Thai Nguyen.

Hoang Bich Thuan

Abstract: This topic focuses on building a shipping management system to improve operational efficiency for Khanh Thinh Transport Company in Thai Nguyen. Through research, we identified the actual needs of the business and set the goal of developing an application that supports the integration of packaging, delivery, and cargo tracking processes. The approach combines theory and practice to ensure the application fits the scale and specific requirements of the business. The system is expected to bring significant efficiency in logistics management, improve services, and enhance the company's profitability.
